

If convertible transcendentals are, in their way, interest-relative or -dependent, is this true, also, of disjunctive transcendentals?

Yes—and no. Yes, insofar as disjunctive transcendentals can be applied only to things to which convertible transcendentals are also, in some way, applicable. But no, insofar as the disjunctions between concrete and abstract, fragmentary and nonfragmentary, are not interest-relative or -dependent, but interest-absolute or -independent.
