

If  $x$  is the all-worshipful,  $x$  must be the modally all-inclusive or unsurpassable. But, then,  $x$  must exist necessarily, since if  $x$  were to exist only contingently, there would be one possibility—namely, of its own nonexistence—that it couldn't include, and so it wouldn't be modally all-inclusive or unsurpassable and therefore couldn't be the all-worshipful after all.
