Application Navigator 3.0 Enhancements

Release 3.0 contains these enhancements.

Improved User Interface

The user interface has been enhanced with this release of Application Navigator.

The vertical menu has been redesigned. Some icons that were previously located on the horizontal menu have been moved to the vertical menu for ease of access. New icons have been designed to provide better contrast and enhanced visibility. A new dashboard icon provides easy access to the landing page of the application.

The new UI follows 'mobile first' design principles and focuses on access through portable devices.

Accessibility has been improved with new and comprehensive keyboard shortcut options for various actions.

For details about the UI changes, see the *Application Navigator Handbook*.

Google Analytics Support

With this release, Google Analytics is supported on Application Navigator.

Application Navigator uses Google Analytics to capture usage details of specific pages, including the login, logout and error pages. All Banner 9x Self-Service applications that are integrated with Application Navigator and configured with Google Analytics will be tracked.

For information on enabling Google Analytics, see the *Application Navigator Installation Guide*.

Support for Spring Security Port Forwarding

With this release, port forwarding configurations are supported.

Spring Security Port Forwarding Configuration entries support menu service callbacks based on port forwarding requests. The spring security port mapper configuration can be used to override the pre-configured port and to redirect callback URLs to the forwarded port at run-time.

For port forwarding configuration information, see the *Application Navigator Installation Guide*.

Application Navigator 3.0 Resolutions

For more information about defect corrections in this release, see the *Banner Application Navigator 3.0 Resolutions Report*.

A Resolutions Report lists the resolved change requests for a release. Each change request has a Problem, Impact, and Resolution statement. In addition to these statements, every change request has a URL. By copying and pasting the URL into a web browser, you can see more details about the change request on the Ellucian Support Center.

The Resolutions Report for Banner Application Navigator 3.0 can be found in the Ellucian Support Center Documentation Libraries under Banner General.

In addition to the CRs listed in the resolutions report, the following CRs that were resolved in previous patch releases are also being delivered with this release:

• CR-000148361
• CR-000149755
• CR-000147996
• CR-000152065
• CR-000153145
• CR-000154097

More details about these CRs can be found on the Ellucian Support Center.

There is one known issue that has not been resolved with this release, related to VoiceOver functionality. See the details for CR-000155146 on the Ellucian Support Center.
